PROFESSIONAL EXPERIENCE

Independent Software Engineering & Graduate Admission

Mar 2025 – Present

Following the AWS SDE internship, transitioned focus from cloud support toward full-time software engineering. Built and shipped independent applications, including a project management platform with role-based access and Gantt scheduling, an AI-powered contract review tool, and a real-time fire alarm detector on embedded hardware, deepening backend design skills in Python and C++, LLM integration, and applied prompt engineering. Admitted to Georgia Tech's OMSCS Master's program in Computer Science with an AI specialization, coursework beginning August 2026.

Amazon Web Services — Cloud Support Engineer I

Feb 2023 – Feb 2025

StriDE Program (Internal Pilot SDE Training + Internship), Dec 2023 – Aug 2024

- Architected a RAG knowledge extraction pipeline using AWS Bedrock, LangChain, and Amazon Neptune, ingesting over 1,000 documents and cutting manual review time by 60%.
- Engineered a Lambda-based API service in Python with Smithy IDL and S3, building error handling, throttling, and request validation for concurrent production workloads.
- Designed entity disambiguation logic using Bedrock reasoning to deduplicate LLM-extracted entities against Neptune, enabling human-in-the-loop review for novel entries.
- Implemented infrastructure as code with AWS CDK (TypeScript), cutting deployment times from hours to minutes and resolving a defect in internal Smithy IDL tooling.

Cloud Support Engineering

- Debugged customer source code and SDK integration issues across Lambda, API Gateway, Cognito, and AppSync in distributed serverless architectures.
- Diagnosed root causes of Lambda cold starts, VPC networking timeouts, and IAM permission boundary failures under SLA-bound response windows.
- Led post-incident root cause analysis for production-impacting events, authoring technical reports that drove service-level improvements for internal engineering teams.

PERSONAL PROJECTS

- **Nexus PM** — Multi-tenant project management platform with 5-tier role-based access, Kanban boards, critical-path (CPM) Gantt scheduling, and earned-value metrics (SPI/CPI); includes a searchable audit trail. [NestJS, Angular 20, TypeORM, Neon Postgres, JWT, NX]
- **ClearClause** — AI contract analyzer that summarizes clauses, provides preference-weighted guidance, and flags scam risk. [React, TypeScript, FastAPI, Gemini, Supabase, Render]
- **Flame Sentinel** — Real-time fire alarm detector on a Raspberry Pi Zero W using a C++ FFT pipeline, with a Flask API and React dashboard for live monitoring and alerts. [C++17, FFTW3, ALSA, Flask, React, Raspberry Pi]
- **COUR** — Anime tracker with custom search ranking, personalized recommendations, and cron-driven email alerts built on the AniList API. [React, Vite, Vercel, Supabase, AniList GraphQL, Resend]

TECHNICAL SKILLS

Languages: Python, TypeScript, C++, SQL, Java (introductory)

Frameworks & Tools: NestJS, Angular, React, Flask, FastAPI, LangChain, Smithy IDL, Vite, Tailwind, TanStack Query

Cloud (AWS): Lambda, Bedrock, Neptune, CDK, EC2, S3, RDS, Cognito, Connect, Amplify, CloudWatch

Other: Node.js, Docker, Kubernetes, Git, Postman, Linux, Raspberry Pi, Gemini API, Supabase, Neon, Resend

EDUCATION

M.S. in Computer Science (AI Specialization), Georgia Institute of Technology (OMSCS) Expected Spring 2028

B.S. in Computer Science, University of Texas at Dallas

Graduated Fall 2022
