PROFESSIONAL EXPERIENCE

Amazon Web Services | Cloud Support Engineer I

Feb 2023 – Feb 2025

Internal SDE Internship

- Built a RAG+LLM knowledge extraction pipeline using AWS Bedrock, LangChain, and Amazon Neptune; ingested 1,000+ documents, reducing manual review time by 60% and improving retrieval accuracy by 70%.
- Designed a Lambda-based API service with Python, Smithy IDL, and S3, implementing full error handling, throttling, and request validation for concurrent production workloads.
- Implemented entity disambiguation logic using Bedrock reasoning to deduplicate LLM-extracted entities against Neptune, enabling human-in-the-loop review for novel entries.
- Developed infrastructure as code with CDK (TypeScript), cutting deployment times from hours to minutes and resolving a critical defect in Smithy IDL tooling.

Cloud Support Engineering

- Resolved 500+ technical support cases for enterprise customers across Lambda, API Gateway, Cognito, and AppSync, reducing incident response time by 80%.
- Diagnosed complex serverless failures (Lambda cold starts, VPC timeouts, IAM permission boundaries, Step Functions) under SLA-bound response windows.
- Managed Sev1–Sev5 production incidents, authored root cause analyses, and delivered post-incident reports to internal engineering teams to drive service improvements.

Freelance Full-Stack Engineer | Contract

Mar 2025 – Present

- Developed backend-driven web applications with modular architecture and automated testing, reducing bug recurrence by 40% and accelerating feature delivery by 25%.
- Architected a full-featured board game companion app from database schema through frontend delivery, with social sharing and game history tracking; boosted engagement by 60%, cut manual entry errors by 80%, and reduced lookup time from minutes to seconds.
- Created a real-time backend with custom APIs and external data processing, improving data sync efficiency by 70% and powering a daily health-check dashboard.

PERSONAL PROJECTS

- ClearClause** — AI contract analyzer summarizing clauses, providing preference-weighted guidance, and detecting scam risks. *[React, TypeScript, FastAPI, Gemini, Supabase, Render]*
- Enterprise RBAC Task Manager** — Multi-tenant NX monorepo (NestJS API + Angular 18) with 3-tier RBAC, JWT auth, and full audit logging. *[NestJS, Angular 18, TypeScript, TypeORM, SQLite, JWT, NX]*
- Flame Sentinel** — Real-time fire alarm detector on Raspberry Pi Zero W using a C++ FFT pipeline, achieving 98% accuracy and sub-500ms latency; Flask API + React dashboard. *[C++17, FFTW3, ALSA, Flask, React, Raspberry Pi]*
- Nexus PM** — Multi-tenant project workspace with RBAC, Kanban, WBS, critical-path scheduling, earned-value metrics, and full audit trail. *[NestJS, Angular, TypeORM, Neon, Docker, JWT]*
- COUR** — Anime tracker with custom search ranking, personalized recommendations, and cron-driven email alerts on top of AniList. *[React, Vite, Vercel, Supabase, AniList GraphQL, Resend]*

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, C++, SQL

Frameworks & Tools: NestJS, Angular, React, Flask, FastAPI, LangChain, Smithy IDL, Vite, Tailwind, TanStack Query

Cloud (AWS): Lambda, Bedrock, Neptune, CDK, EC2, S3, RDS, Cognito, Connect, Amplify, CloudWatch

Other: Node.js, Docker, Kubernetes, Git, Postman, Linux, Raspberry Pi, Gemini API, Supabase, Neon, Resend

EDUCATION

M.S. in Computer Science (AI Specialization), Georgia Institute of Technology (OMSCS)

Expected Spring 2028

B.S. in Computer Science, University of Texas at Dallas, Richardson, TX

Graduated Fall 2022
